

TUNITAS CREEK BEACH IMPROVEMENT PROJECT

DESIGN ALTERNATIVES

July 2020

RECAP OF EXISTING CONDITIONS

The story of Tunitas Creek Beach spans many centuries: once an Ohlone seasonal village, a Portolá expedition stopping point, and the southern terminus of the Ocean Shore Railroad,

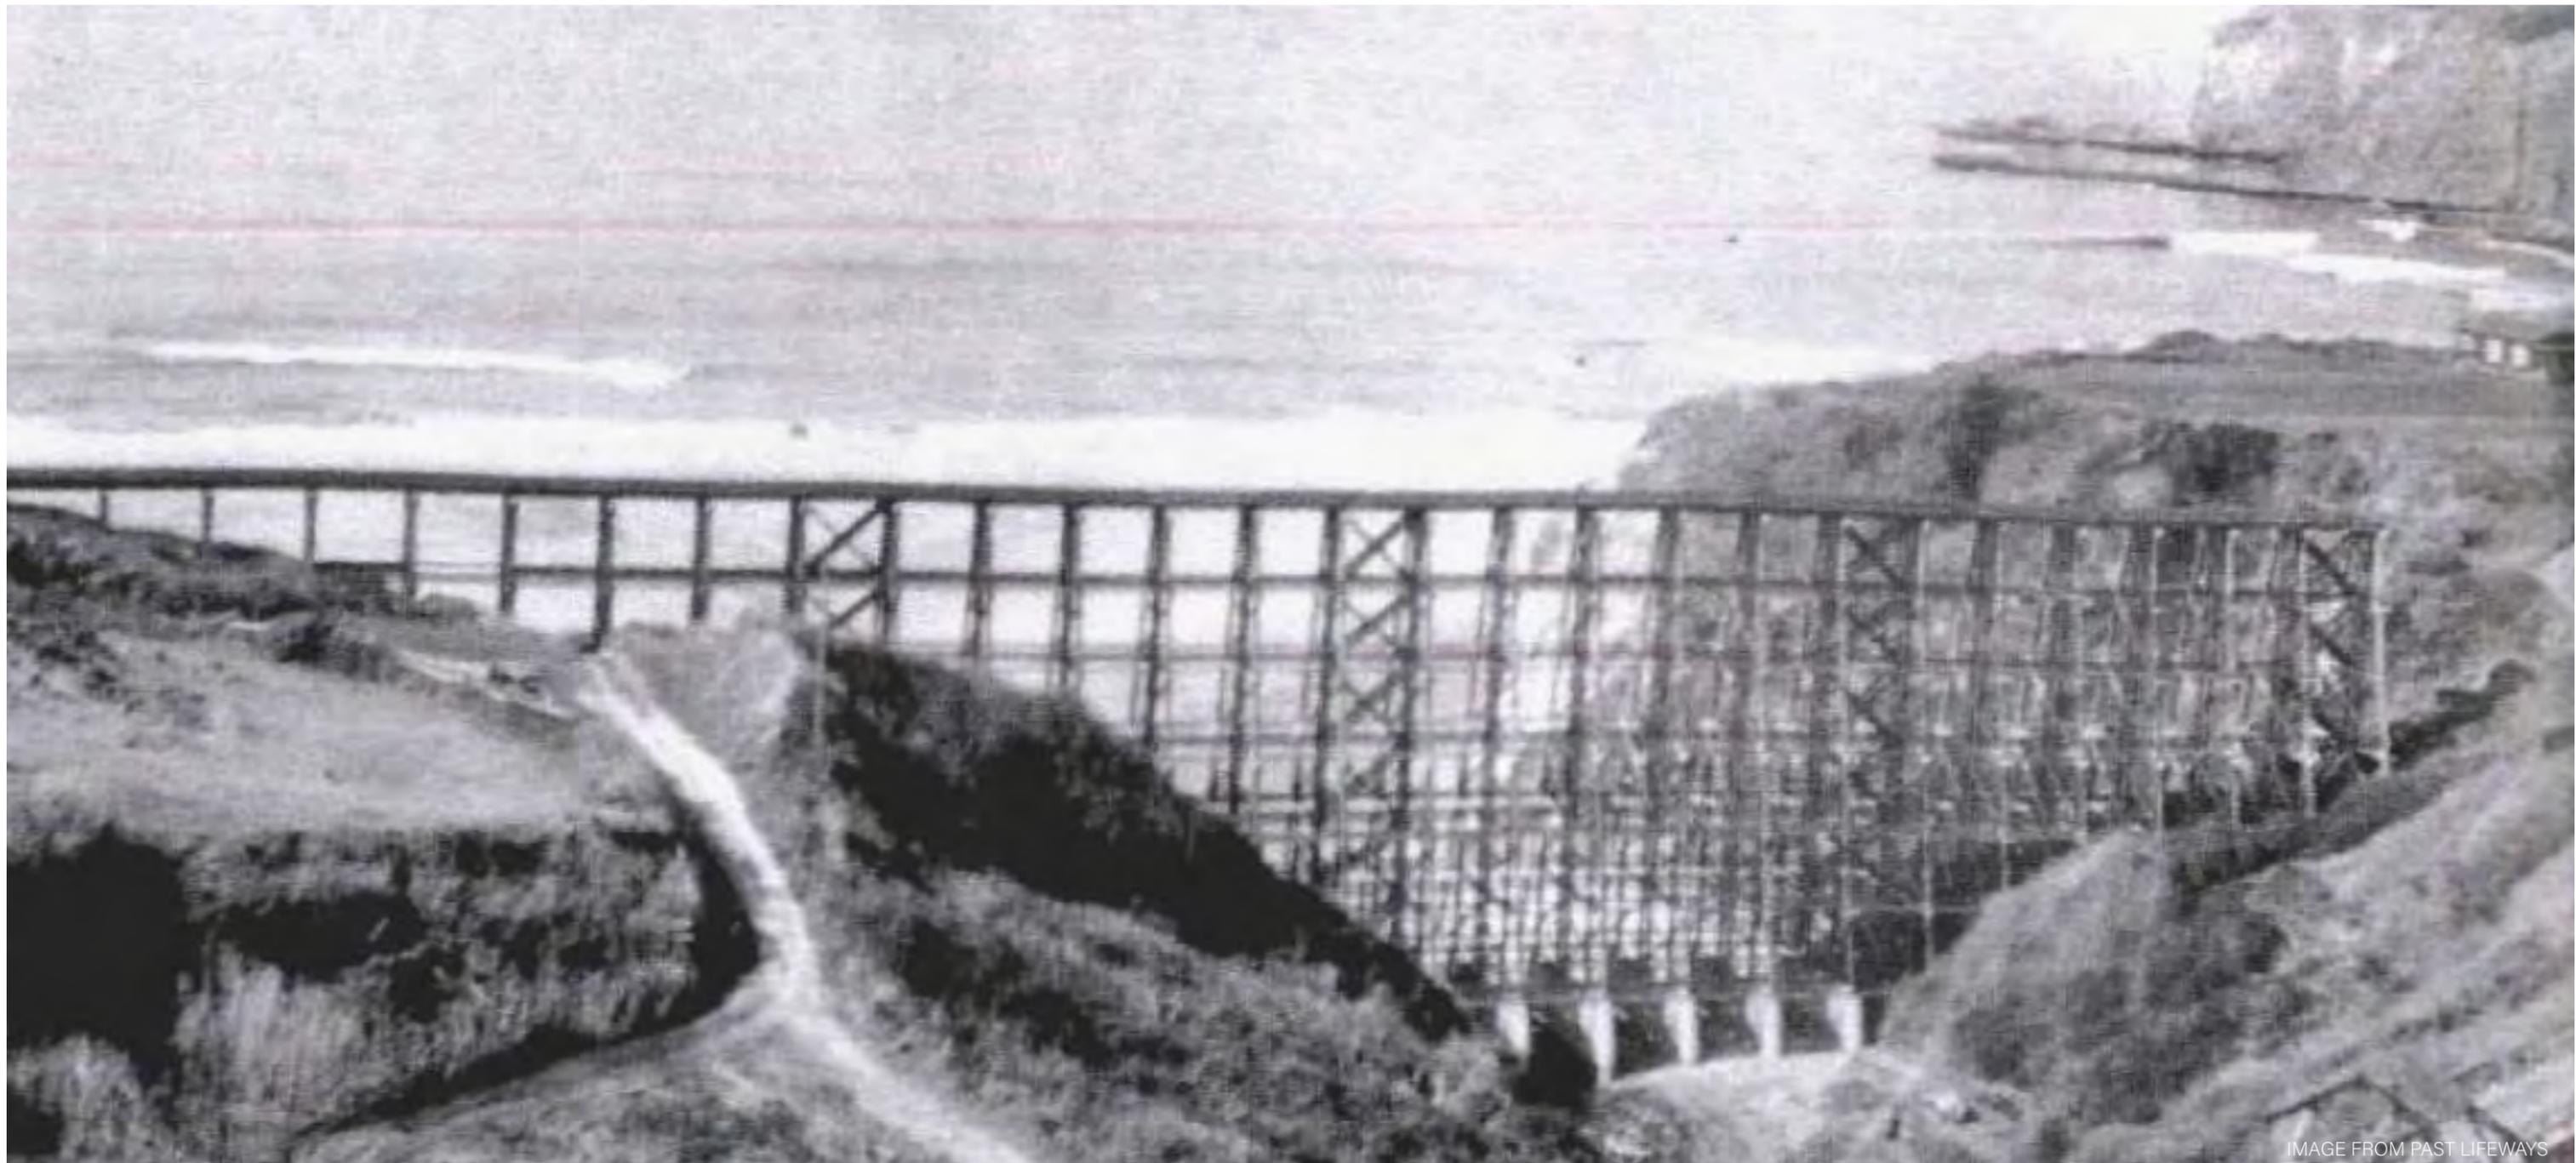

IMAGE FROM PAST LIFEWAYS

RECAP OF EXISTING CONDITIONS

now a place for relaxation and recreation.

IMAGE FROM POST

RECAP OF EXISTING CONDITIONS

The beach and the bluffs surrounding it contain unique habitat assemblages for rare and sensitive species,

IMAGE BY LEE KARNEY

RECAP OF EXISTING CONDITIONS

as well as stunning natural beauty and iconic views.

RECAP OF EXISTING CONDITIONS

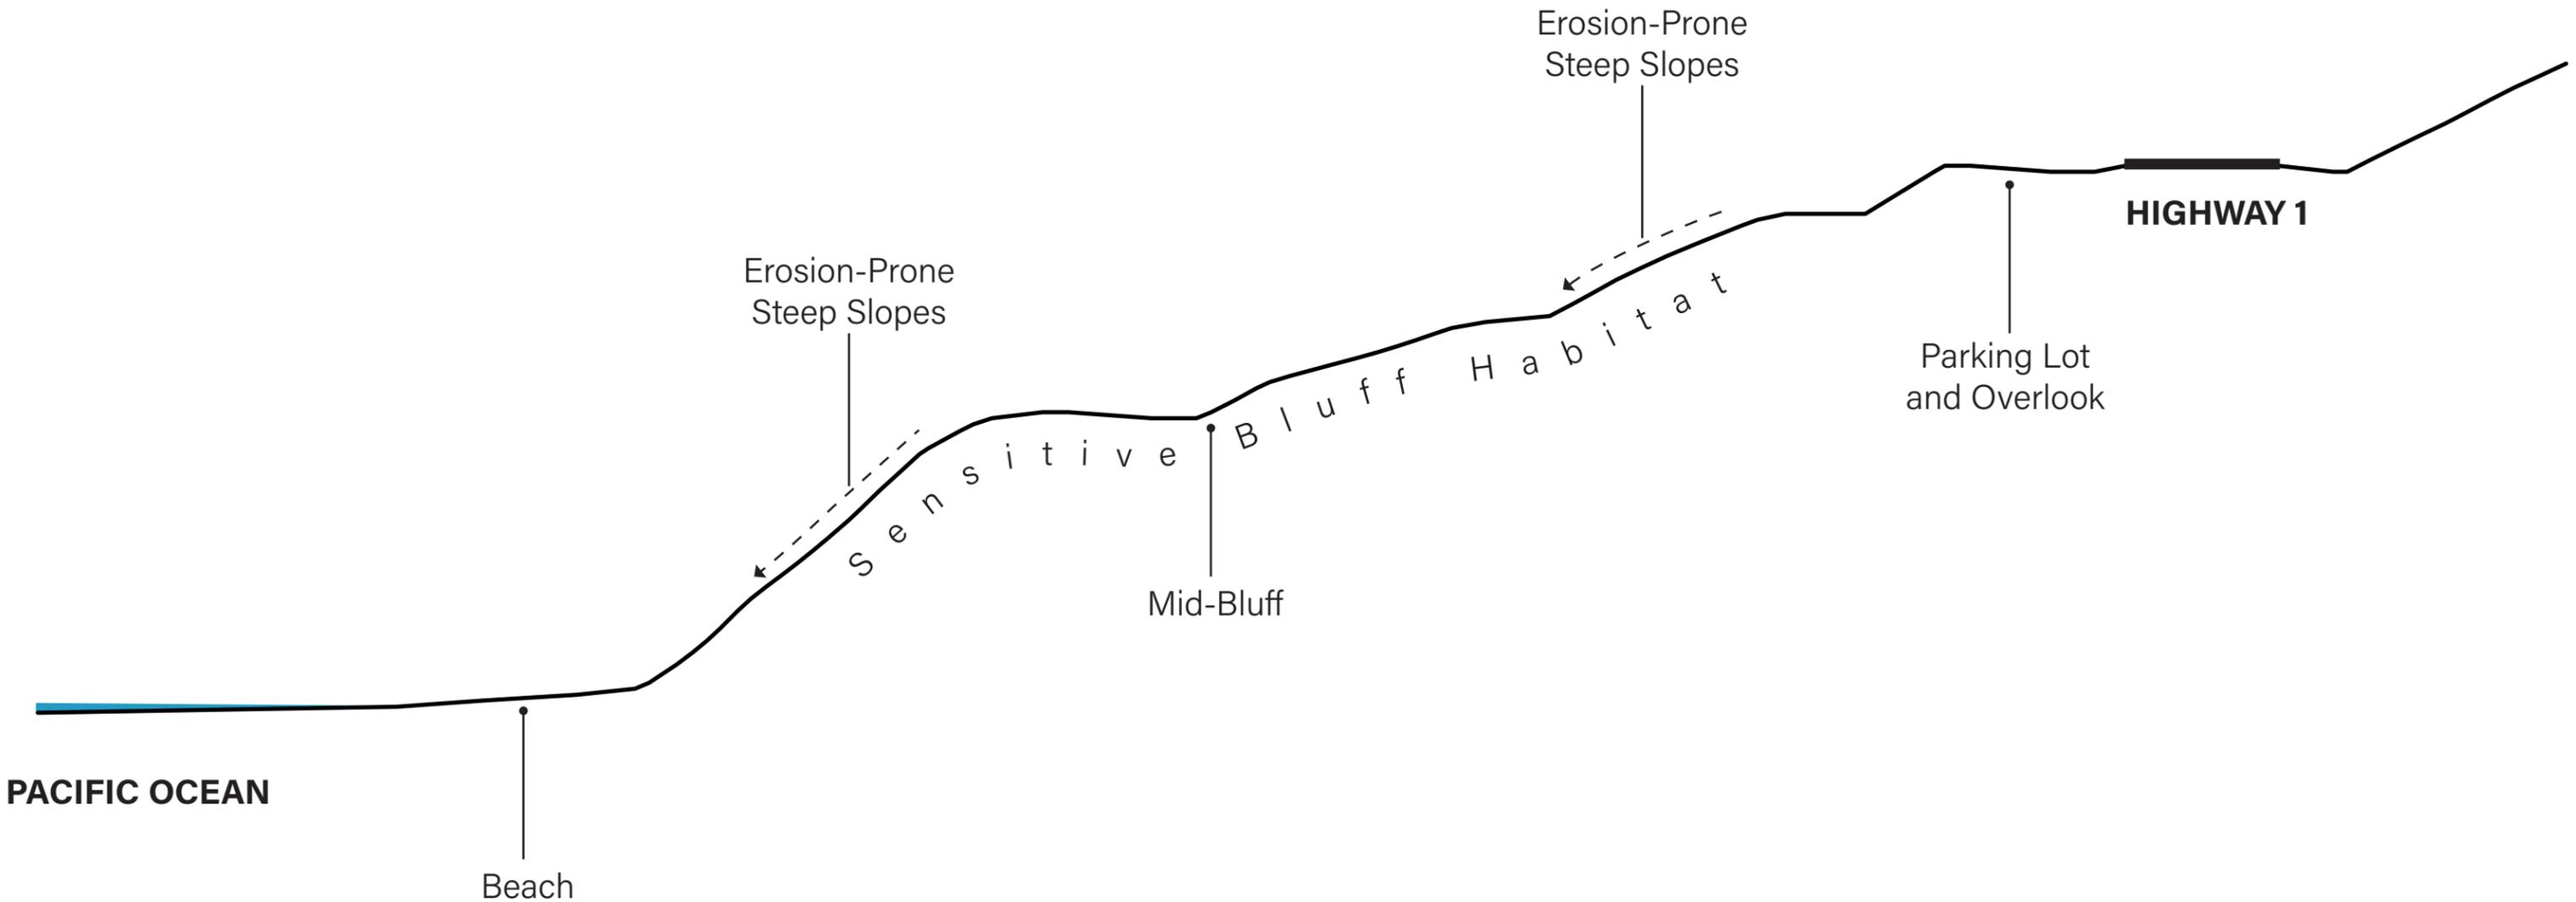

These bluffs create challenges to access and circulation,

RECAP OF EXISTING CONDITIONS

and lead to erosion and landslides on sensitive bluff habitat.

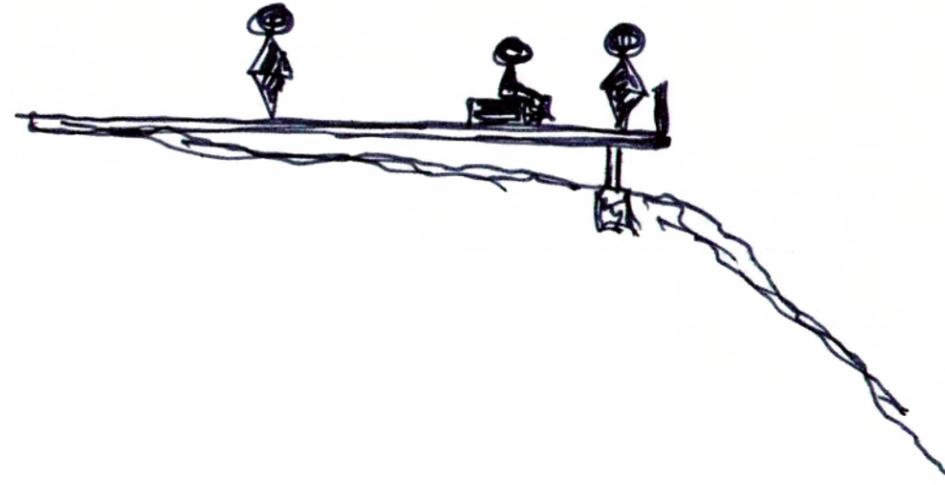

ABOUT THE ALTERNATIVES

With this context in mind, the project team is designing three scenarios that consider changes to the site at a low, medium, and high impact level:

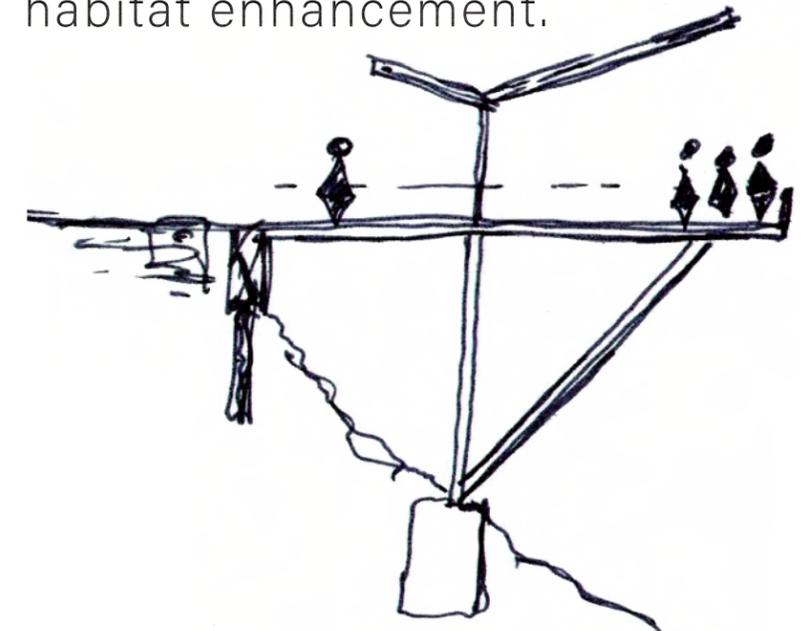

Alternative 1: Minimum improvements to get the park open and stabilize sensitive landscapes.

Alternative 2: Additional improvements to enhance operations, user experience and site restoration.

Alternative 3: Full build-out for maximum user experience and habitat enhancement.

- The goal is to find the right balance between providing safe access and creating recreational opportunities, while restoring sensitive habitat and protecting the bluffs and beach from detrimental impacts and misuse.
- At their current stage, these three alternatives should not be seen as separate and distinct options, but rather as explorations from which design elements can be kept or removed.
- The final design is expected to be a hybrid of the three as determined by input from the community on each alternative.

ABOUT THE ALTERNATIVES

ALTERNATIVE 1

Minimum improvements to get the park open and stabilize sensitive landscapes

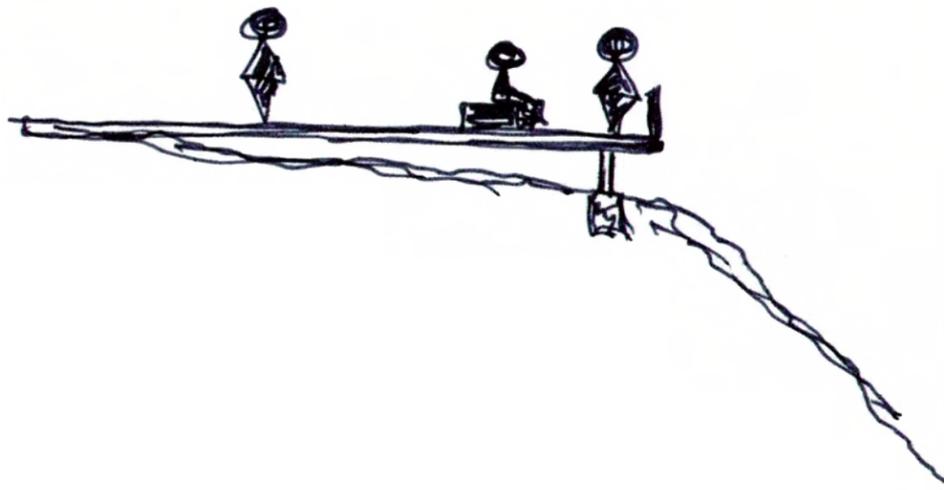

- Improvements to the entry configuration, vehicular circulation, and parking layout
- Replace unregulated dirt shoulder parking with new driveways, parking bays, and accessible parking
- Existing residence removed and native planting restored
- Public restroom at the mid-bluff* area
- Clear and safe access to beach designated by wayfinding markers and signage
- Removal of some invasive vegetation and restoration of natives

ALTERNATIVE 2

Additional improvements to enhance operations, user experience and site restoration

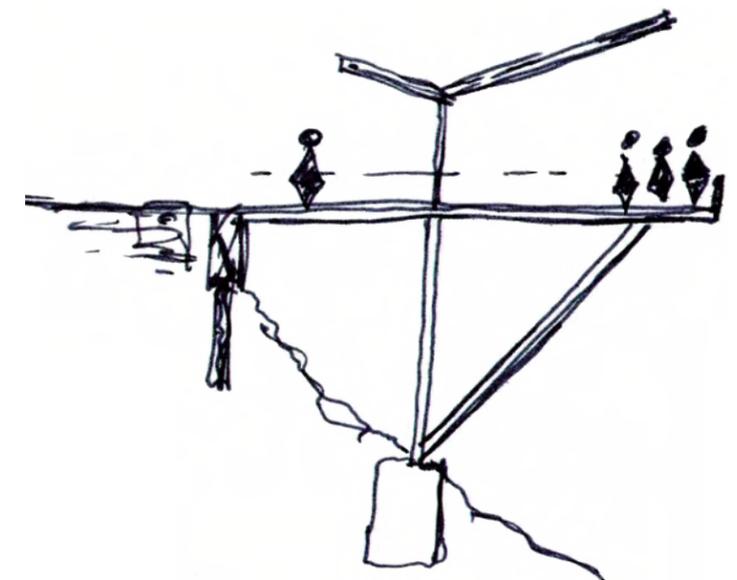

- Additional improvements to the entry configuration, vehicular circulation, and parking
- Larger number of parking spaces
- Larger paved promenade at the top of bluff next to parking area
- Addition of ranger station and residence at the mid-bluff area
- Creation of habitat protection zones for threatened species such as the snowy plover
- Accessible pathway to the mid-bluff
- Additional seating structures at overlook points
- Creation of a loop trail

ALTERNATIVE 3

Full build-out for maximum user experience and habitat enhancement

- Full build-out of parking area designed for maximum potential carrying capacity
- Addition of visitor center experience and group campgrounds
- Potential for cantilevered overlook structures extending over edge of cliffside for maximum panoramic viewpoints
- Overhead structures added at overlook points and picnic pavilions
- Additional habitat protection measures taken for sensitive vegetation and threatened species
- Larger paved mid-bluff experience

Let's hear from you! Which design elements should be prioritized for when the park first opens? What is the full extent of development that you feel is appropriate to Tunitas Creek Beach? Take the Follow-up Survey!

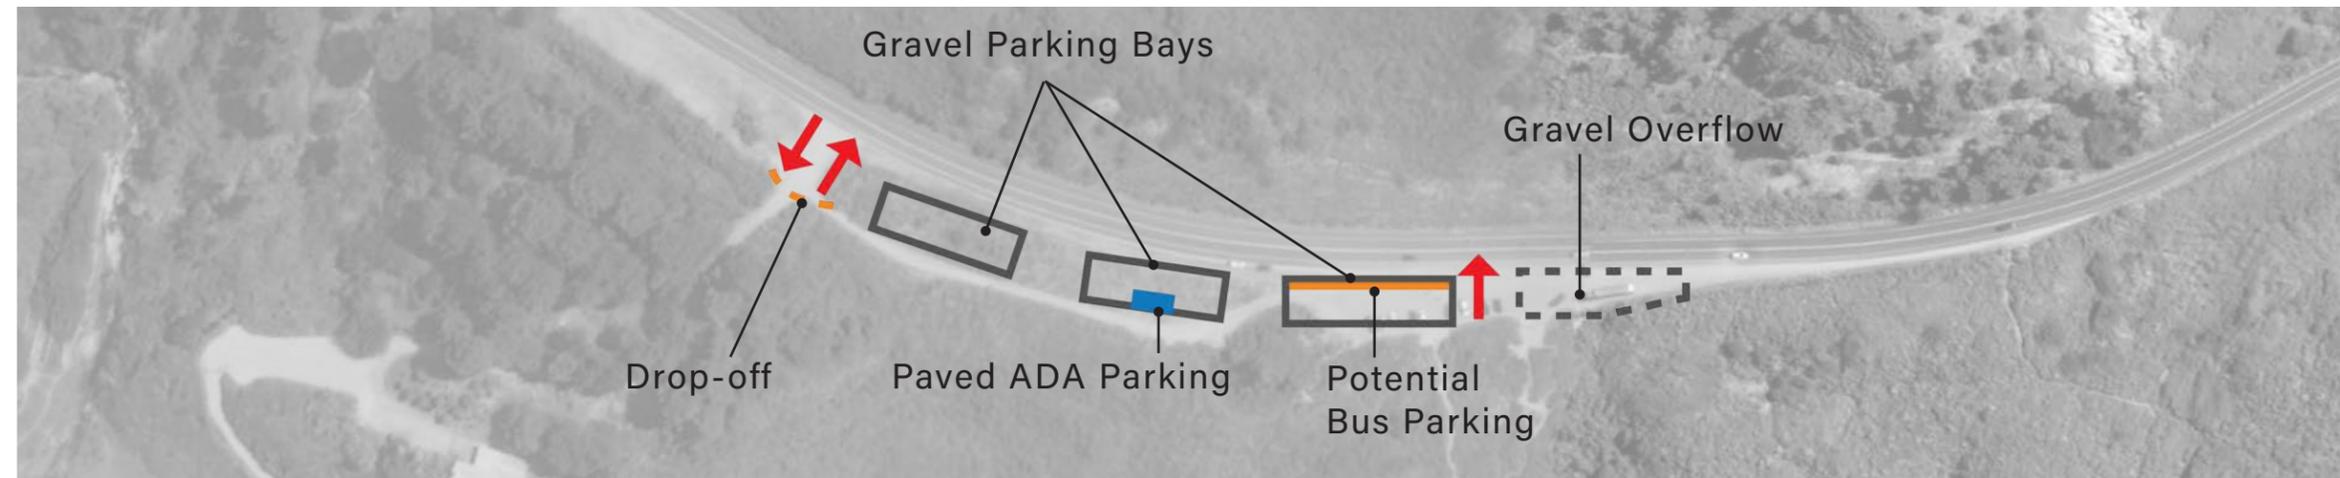

**Throughout the presentation, we will be using the term "mid-bluff" to refer to the relatively flat area near the existing residence*

ALTERNATIVES OVERVIEW: PARKING

HOW MUCH PARKING SHOULD THE SITE PROVIDE FOR VISITORS? HOW DO WE ACCOMMODATE PARK VISITORS SAFELY?

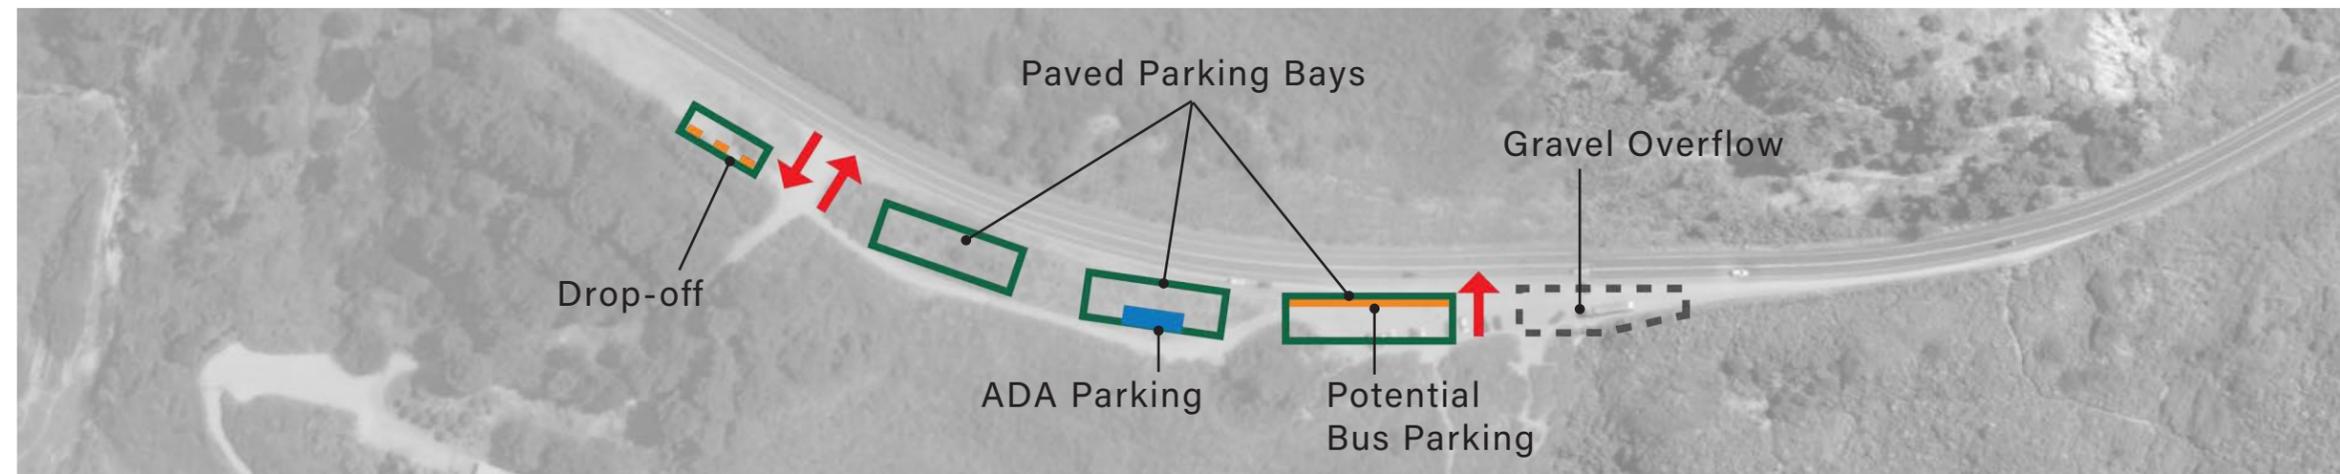

Alternative 1:

- ~60 public parking spaces
- ~20 overflow parking spaces
- ~4 ADA parking spaces
- Drop-off

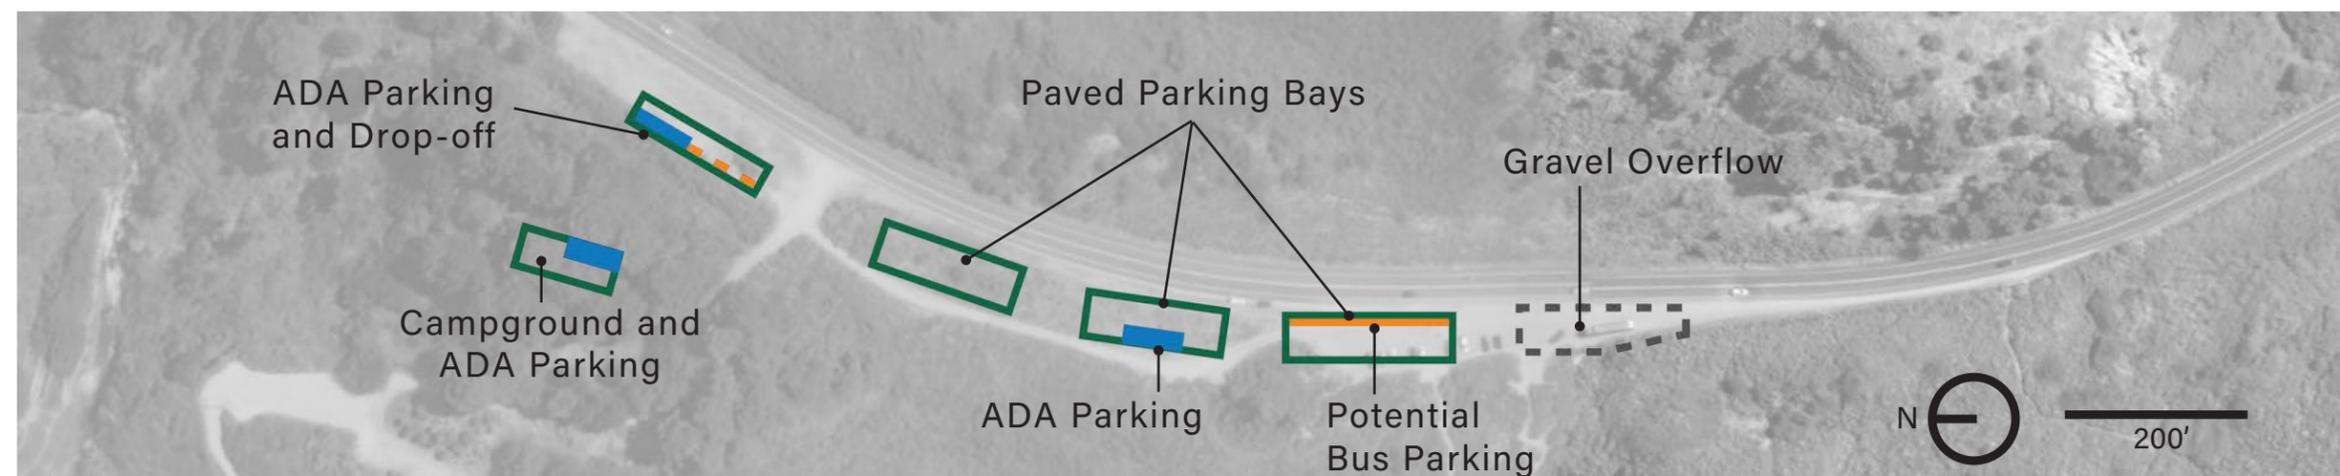

Alternative 2:

- ~60 public parking spaces
- ~20 overflow parking spaces
- ~5 ADA parking spaces
- Drop-off

Alternative 3:

- ~90 public parking spaces
- ~20 overflow parking spaces
- ~6 ADA parking spaces
- Campground parking spaces
- Drop-off and bus parking

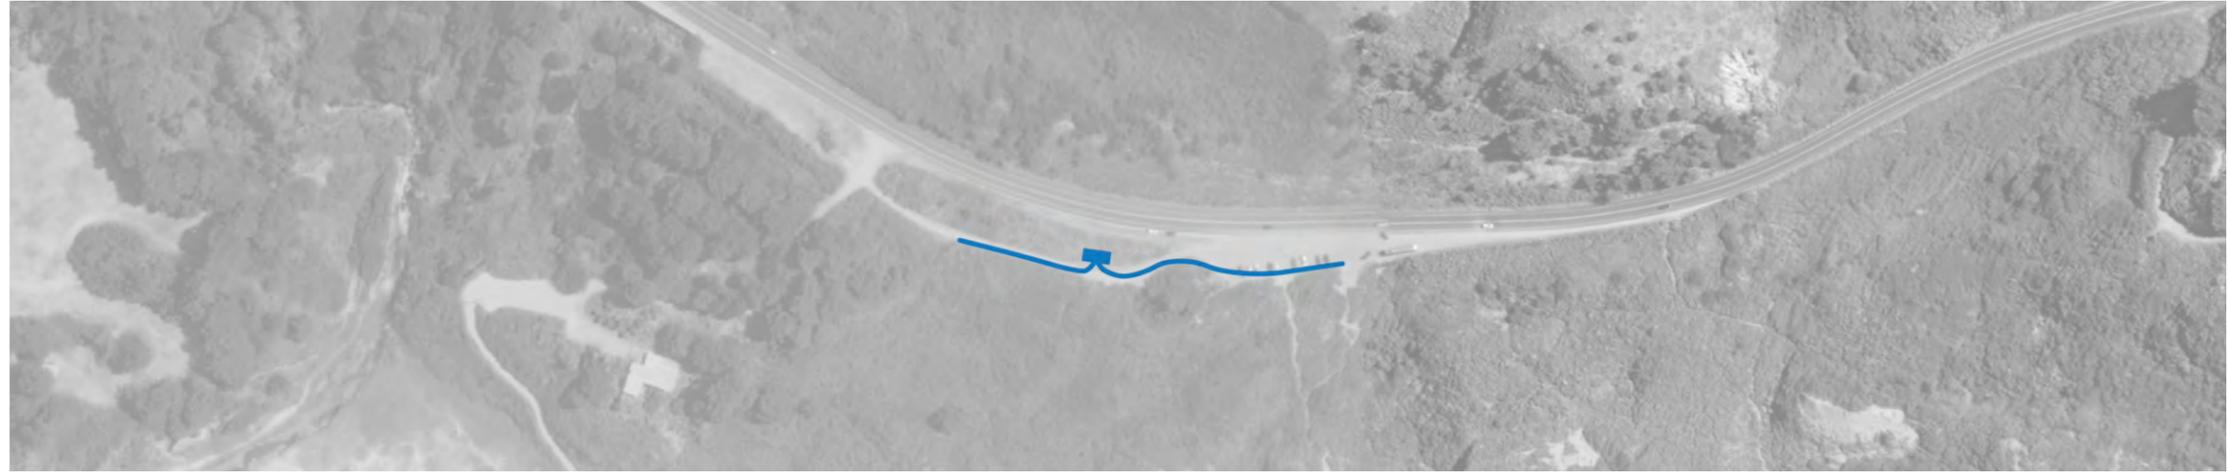

ALTERNATIVES OVERVIEW: SITE ACCESSIBILITY

HOW SHOULD THE SITE ACCOMMODATE USERS WITH LIMITED MOBILITY?

Alternative 1:

- ADA-Accessible Overlook and Promenade

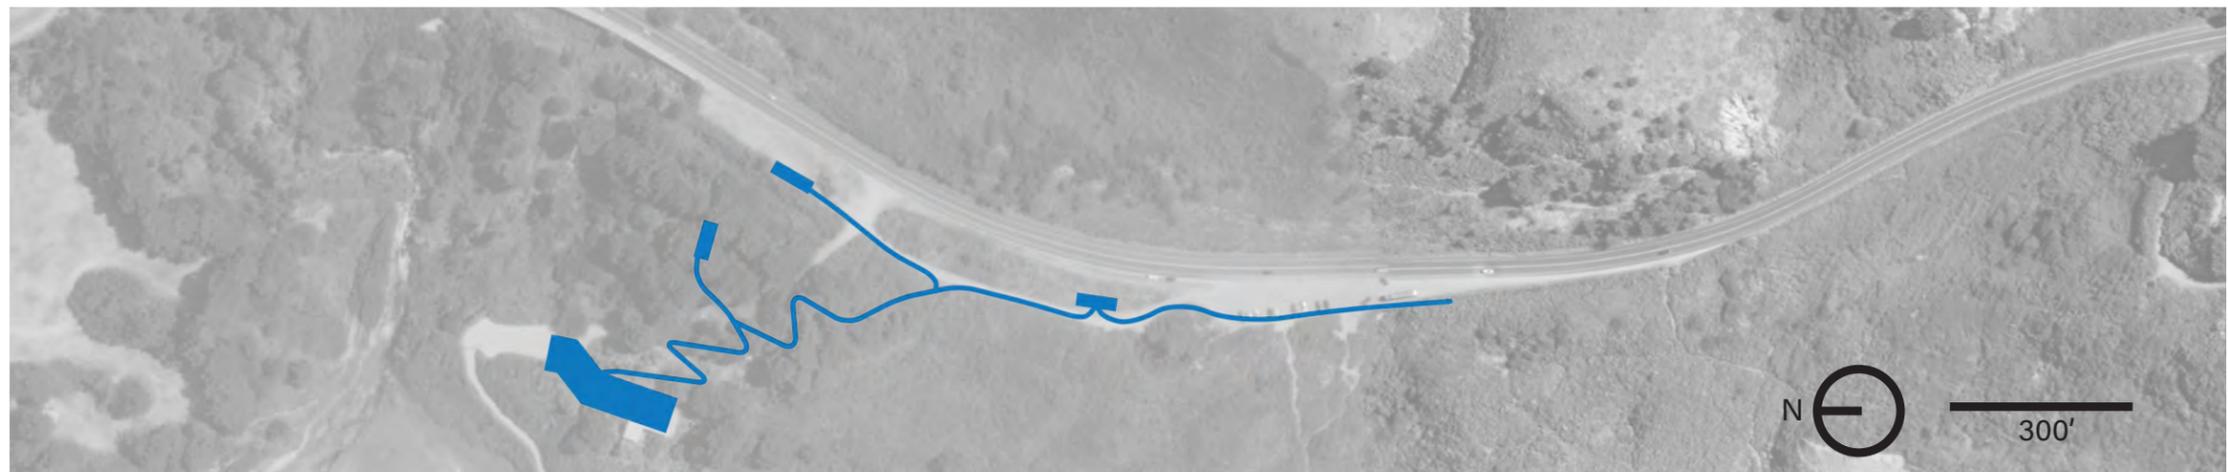

Alternative 2:

- ADA-Accessible Overlooks and Promenade
- ADA Path to Mid-Bluff

Alternative 3:

- ADA-Accessible Overlooks and Promenade
- ADA Path to Mid-Bluff
- ADA-Accessible Mid-Bluff Experience
- ADA Path to Visitor Center

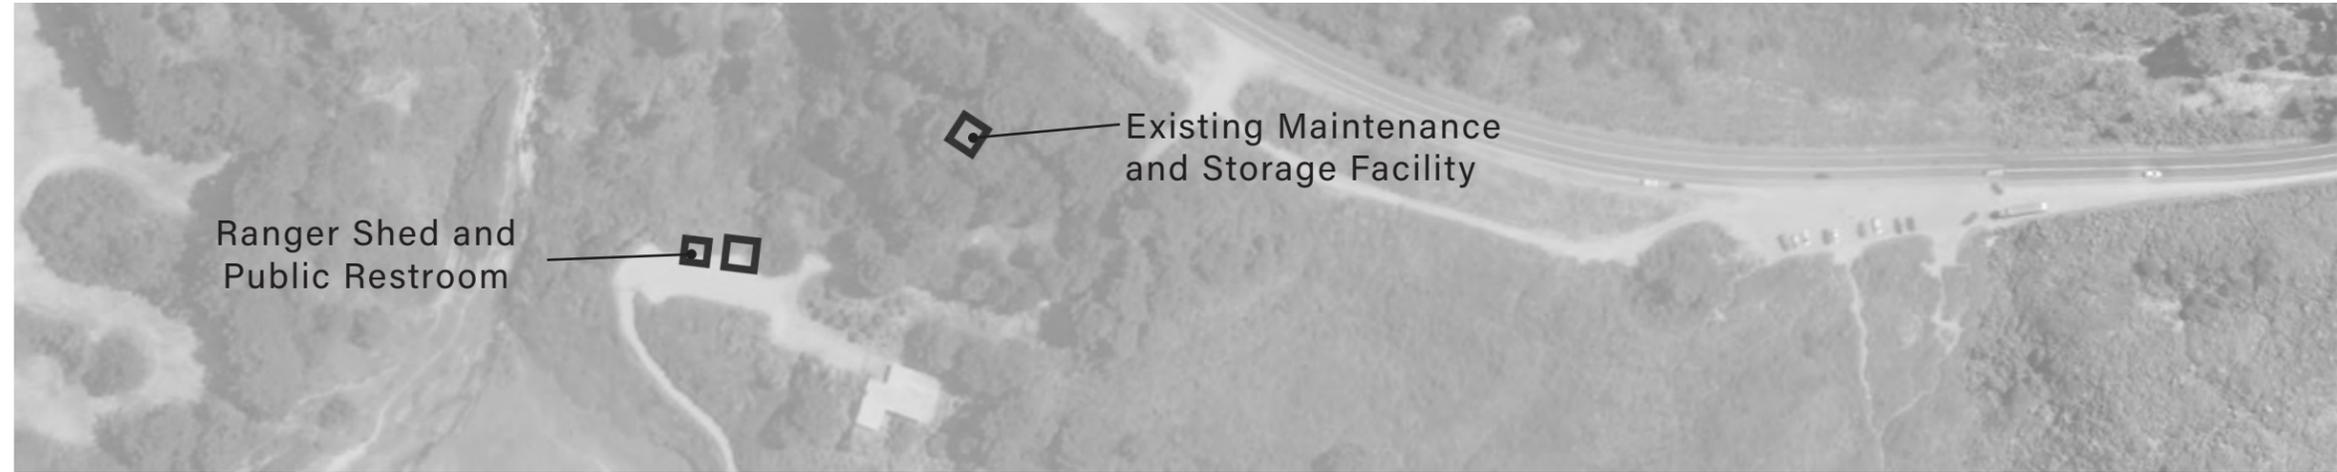

*ADA: Americans with Disabilities Act. We will use this term to refer to features which meet the accessibility requirements for those with disabilities.

ALTERNATIVES OVERVIEW: BUILDINGS

WHAT STRUCTURES AND PHYSICAL IMPROVEMENTS ACCOMMODATE AND ENHANCE USER EXPERIENCE?

Alternative 1:

- Ranger Shed: 100-150 sqft
- Public Restroom: 400-500 sqft
- Existing Maintenance/Storage: 1,000 sqft

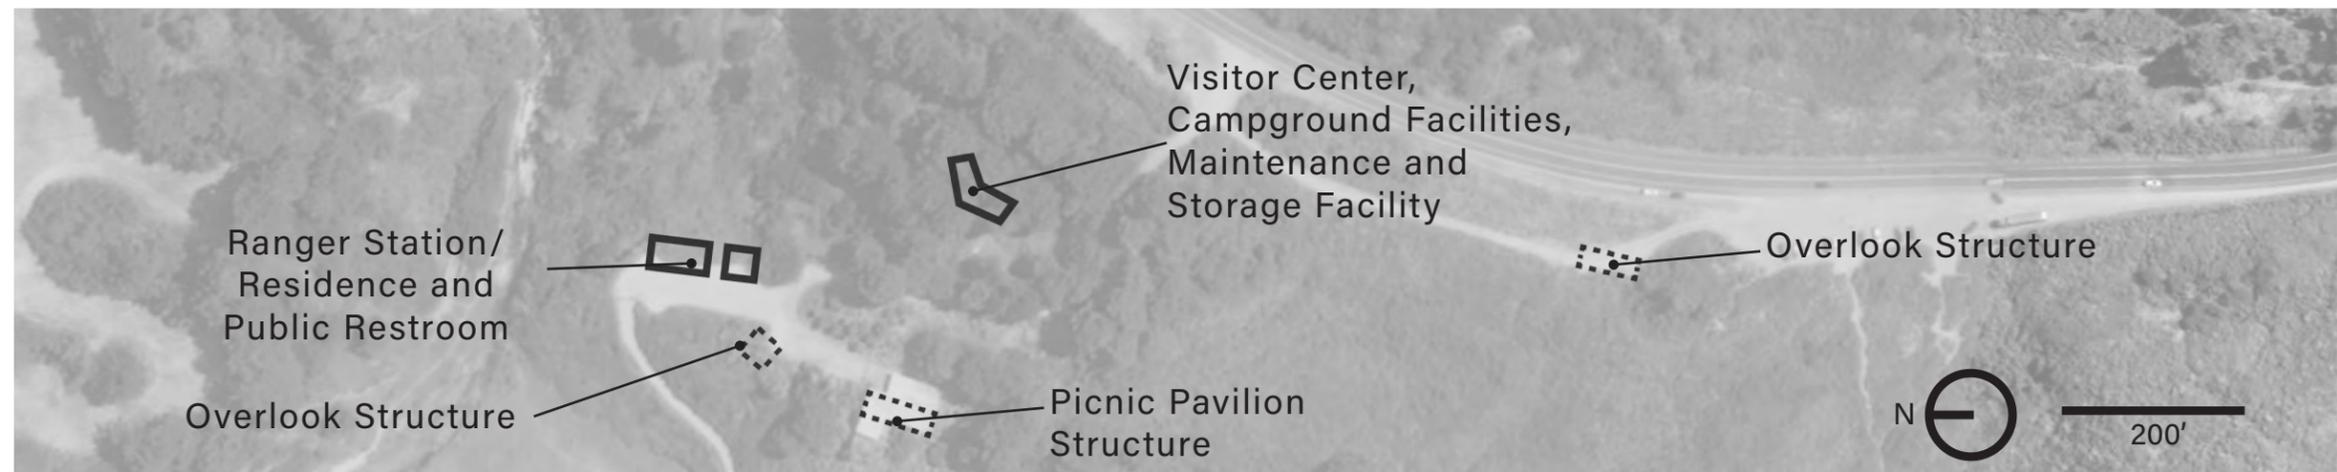

Alternative 2:

- Ranger Station and Residence: 1,000-1,500 sqft
- Public Restroom: 400-500 sqft
- Existing Maintenance/Storage: 1,000 sqft

Alternative 3:

- Ranger Station and Residence: 1,000-1,500 sqft
- Public Restroom: 400-500 sqft
- Upgraded Maintenance/Storage: 2,000 sqft
- Visitor Center: 1,200-3,000 sqft
- Campground Facilities: 1,000 sqft

ALTERNATIVE 1

ALTERNATIVE 1: FULL SITE

LEGEND

- 1 Mid-bluff (See enlargement)
- 2 Beach access
- 3 Parking and overlooks (See enlargement)
- 4 Road to mid-bluff for rangers and emergency access only
- 5 Connection to regional trails
- 6 Overflow lot
- 7 Southern areas of site left untouched
- 8 Connection to regional trail (See enlargement)

Potential Snowy Plover Habitat
 Landslide-prone Slopes
 Use of Existing Social Trails Discouraged, Erosion Control Implemented
